SECURED & ON VIDEO

54link compiles, deploys and showcases Africa's operational platforms — Nigeria first, then all 54.  
Prepared 21 September 2026

## About 54link

What this document covers

54link is a technology company that brings together a compiled portfolio of production-grade platforms — tax, trade, maritime, health, payments, energy and governance — built for African markets. Every platform is deployed into a live environment, documented in full, and demonstrated on video. Nigeria is the first use case; the blueprint scales across all 54.

This brochure covers the platforms we have **secured**: deployments that are live right now, verified working, and captured end to end on video. They are the reference deployments we can put in front of a partner today. The remaining platforms in the compiled portfolio are listed at the end.

## Secured platforms at a glance

Deployed, verified, recorded

| PLATFORM               | STATUS   | VIDEO    | LIVE ENVIRONMENT                  |
|------------------------|----------|----------|-----------------------------------|
| Healthpoint            | Deployed | Recorded | healthpoint.newfire.app           |
| Lanai                  | Deployed | Recorded | lanai.newfire.app                 |
| Meridian TaxTech       | Deployed | Recorded | meridian.newfire.app              |
| NDSEP / NGApp          | Deployed | Recorded | ndsep.newfire.app                 |
| INEC Election Platform | Deployed | Recorded | campaign-inec-servers.newfire.app |
| TourismPay             | Deployed | Recorded | tourismpay-servers.newfire.app    |
| UmojaFlowOS            | Deployed | Recorded | umoja.newfire.app                 |
| VPP                    | Deployed | Recorded | vpp.newfire.app                   |

## Secured platforms in detail

Architecture, capability and the problem each one solves

### Healthpoint — Healthcare Data Security

Live: [healthpoint.newfire.app](#) · Video: [healthpoint-walkthrough.mp4](#)

Health information exchange and dispute resolution — deployed and demonstrated with a full logged-in walkthrough.

**Architecture.** React + Express + tRPC · ML-assisted

A platform for ensuring data security for healthcare institutions, utilizing machine-learning algorithms. Built on a React + Express + tRPC stack with end-to-end typed contracts and wired OAuth.

#### KEY FEATURES

- ML-driven security monitoring
- tRPC end-to-end typed contracts
- OAuth wired in

#### PROBLEM IT SOLVES

Healthcare institutions handle sensitive data with weak security tooling — Healthpoint adds ML-backed protection.

**Repositories.** [github.com/munisp/healthpoint](#)

### Lanai — Luxury Travel Concierge Platform

Live: [lanai.newfire.app](#) · Video: [lanai-full-walkthrough.mp4](#)

Luxury travel concierge advisor portal — deployed with every service in the menu exercised on video.

**Architecture.** React + Vite · Twenty CRM backend · Python/Flask AI microservices

A full-stack advisor portal and client-facing portal for Lanai Lifestyle, a luxury travel concierge company, with an AI-powered microservice suite on top of Twenty CRM.

#### KEY FEATURES

- Advisor + client dual portal
- Twenty CRM integration
- Python/Flask AI microservices

#### PROBLEM IT SOLVES

Luxury concierge businesses juggle clients across chat and spreadsheets — Lanai centralises advisory and client experience with AI assistance.

**Repositories.** [github.com/munisp/lanai](#)

## Meridian TaxTech — Nigerian NRS Unified Tax Platform

Live: [meridian.newfire.app](#) · Video: [meridian-walkthrough.mp4](#)

Nigeria Revenue Service TaxTech compliance plane — six compliance modules, all reporting healthy.

**Architecture.** Go + Python · monorepo core, microservice planes, signed YAML rule packs, TigerBeetle ledger

The unified tax platform for Nigeria's Nigeria Revenue Service (NRS): a shared platform core (middleware spine, rule-pack registry, TIN graph, feature store, TigerBeetle ledger services), a compliance plane (e-invoicing T1/T2/T3, POS-VAT T6, WHT T7, TP/CbCR T8, ETR T9, CARF/VASP T10), a sovereign gov enclave (NRS analytics T4, JRB harmonisation T11, institutional case management T13, customs rails T15), and an inclusion plane (informal-sector onboarding T5, presumptive tax T12, taxpayer education T14 with agent app, USSD and white-labeling).

### KEY FEATURES

- E-invoicing and MBS pre-clearance
- Rev360 reconciliation workbench
- Sovereignty boundary — gov enclave deployed separately
- Signed versioned rule packs (rp-\*) for VAT baskets, presumptive bands, ETR formulas
- USSD + agent app for informal-sector inclusion

### PROBLEM IT SOLVES

Nigerian tax administration is fragmented across legacy systems and excludes the informal economy — Meridian unifies compliance, sovereignty, and inclusion into one platform the NRS can operate.

**Repositories.** [github.com/munisp/meridian-core-platform](#), [github.com/munisp/meridian-compliance-suite](#), [github.com/munisp/meridian-gov-enclave](#), [github.com/munisp/meridian-inclusion-suite](#), [github.com/munisp/meridian-rule-packs](#)

## NDSEP — National Data Sovereignty Enforcement Platform

Live: [ndsep.newfire.app](#) · Video: [ndsep-demo.mp4](#)

National Data Sovereignty Enforcement Platform — 18 operational sections captured in demo mode.

**Architecture.** TypeScript · full-stack, regulator-grade platform (NDPC-facing)

Nigeria's regulatory-grade platform for data protection compliance, breach management, and sector oversight under the Nigeria Data Protection Act 2023. Built for the Nigeria Data Protection Commission (NDPC). Includes real-time compliance dashboards cutting across finance, health, and education sectors, plus Healthpoint for healthcare-institution data security using machine learning.

### KEY FEATURES

- Compliance management under NDPA 2023
- Breach management and reporting pipelines
- Sector oversight with real-time dashboards (finance, health, education)
- ML-driven data security for healthcare (Healthpoint)

### PROBLEM IT SOLVES

Nigeria's NDPA 2023 created obligations but no unified enforcement tooling — NDSEP gives the regulator a single platform to register, monitor, and enforce data-protection compliance nationwide.

**Repositories.** [github.com/munisp/ndsep](#), [github.com/munisp/NGApp](#)

## INEC — Election Management System

Live: [campaign-inec-servers.newfire.app](#) · Video: [inec-demo.mp4](#)

INEC Digital Twin campaign platform — repaired from a broken schema to a fully seeded, working deployment.

**Architecture.** Full-stack · production-grade, under active development

A production-grade, full-stack election management system built for Nigeria's electoral infrastructure; some components are production-ready while others are in progress.

### KEY FEATURES

- Full election lifecycle management
- Built for Nigerian electoral infrastructure
- Production-grade engineering standards

### PROBLEM IT SOLVES

Election administration in Nigeria needs transparent, auditable technology — this system targets that operational core.

**Repositories.** [github.com/munisp/inec](https://github.com/munisp/inec)

## TourismPay — Multi-Currency Tourism Payments

Live: [tourismpay-servers.newfire.app](#) · Video: [tourismpay-demo.mp4](#)

Multi-currency tourism payments — merchant services, onboarding and fraud monitoring.

**Architecture.** Full-stack PWA · multi-currency wallets, QR payments

A full-stack tourism payment PWA for African markets with multi-currency wallets, QR payments, merchant onboarding, and compliance features.

### KEY FEATURES

- Multi-currency wallets
- QR payments
- Merchant onboarding
- Compliance built in

### PROBLEM IT SOLVES

Tourists in African markets face fragmented payments — TourismPay gives merchants one compliant, multi-currency acceptance surface.

**Repositories.** [github.com/munisp/tourismpay](https://github.com/munisp/tourismpay)

## UmojaFlowOS — Cross-Border B2B Payment Orchestration

Live: [umoja.newfire.app](#) · Video: [umoja-demo.mp4](#)

Cross-border payment control for Africa-linked corridors — Nigeria, Kenya and South Africa.

**Architecture.** TypeScript · enterprise control plane

An enterprise control plane for Africa-linked cross-border B2B payment orchestration across Nigeria (NGN), Kenya (KES), and South Africa (ZAR). It coordinates regulated counterparties rather than replacing them.

### KEY FEATURES

- Multi-currency corridors: NGN, KES, ZAR
- Regulated-counterparty coordination model
- Enterprise-grade orchestration layer

### PROBLEM IT SOLVES

Cross-border B2B payments in Africa are slow, opaque, and compliance-heavy — UmojaFlowOS orchestrates the regulated players instead of bypassing them, making corridors reliable.

**Repositories.** [github.com/munisp/UmojaFlowOS](https://github.com/munisp/UmojaFlowOS)

## VPP — Open Source Virtual Power Plant Platform

Live: [vpp.newfire.app](#) · Video: [vpp-demo.mp4](#)

Virtual Power Plant control plane — live telemetry, asset management and power trading.

**Architecture.** TypeScript · MIT-licensed, device-protocol-native

An open-source virtual power plant platform: it registers distributed energy resources, forecasts and optimizes their dispatch, controls them over the protocols the devices actually speak, and trades the aggregated capacity.

### KEY FEATURES

- DER registration and forecasting
- Native device-protocol control
- Energy trading on aggregated capacity

### PROBLEM IT SOLVES

Distributed energy assets (solar, batteries, EVs) sit idle and uncoordinated — VPP aggregates them into a dispatchable, tradable power plant.

**Repositories.** [github.com/munisp/vpp](https://github.com/munisp/vpp)

## The wider compiled portfolio

## Next steps

How to take this further

- **Guided walkthrough.** Each secured platform can be demonstrated live in a working session.
- **Environment access.** Dev environments are available for partner evaluation with real workflows.
- **Deployment planning.** Migration, integration and support models scoped per platform.
- **Partnership.** Agency and private-sector partnerships across the 54link portfolio.
